Connecting Film and Media Production Through Metadata: From Production to Post-Production

Challenges we want to address

- Underutilization of Camera and Sensing Metadata
 - VFX artists still need to perform a significant amount of manual work.
 - Cameras capture and store rich metadata, including lens data, but much of it remains underutilized.
 - The use of sensing data in post-production is gaining momentum.
- Loss of Metadata Continuity
 - Valuable camera metadata captured during shooting is often lost during transcoding for post-production.
 - Manual data entry leads to inefficiencies and errors.
- Lack of Interoperability Between Devices and Applications
 - Each vendor defines its own metadata format.
 - USD pipelines are not sufficiently integrated with production metadata.

**Define standardized metadata in OpenEXR
to ensure consistency from production to post-production.**

Streamlined VFX metadata pipeline concept

OpenEXR Camera Metadata Specifications Overview

■ Purpose

- Standardize camera acquisition metadata as OpenEXR Header Attributes for consistent use across OpenEXR and USD pipelines.

Specification	Role	Main Namespaces
Base Specification	Defines the common vendor-neutral acquisition metadata model	acq: *
RDD18 / Sony / Cooke Extension	Maps RDD18, Sony, and Cooke /i metadata	acq: rdd18:*, acq: sony:*, acq: cooke:*
OpenTrackIO Extension	Preserves tracking, external lens, distortion, and calibration data	acq: opentrackio:*, opentrackio:*

We would like to propose these as optional attributes that can be described alongside the scamdkit/camdkit-enabled standard attributes, which are defined as OpenEXR standard optional attributes.

Material List

- Draft documents
 - OpenEXR Attributes Base Specification for Camera Acquisition Metadata
 - OpenEXRAttributesBaseSpecification(Draft)V0.50d2.pdf
 - OpenEXR Attributes Source Extension for RDD18, Sony Private Acquisition Metadata, and Cooke Protocol Metadata
 - OpenEXRAttributesSourceExtension_RDD18Sony(Draft)V050d3.pdf
 - OpenEXR Attributes Specification OpenTrackIO Source Mapping Extension
 - OpenEXRAttributesSpecification_OpenTrackIOSourceMappingV50d2.pdf
